

M86 MailMarshal® SendSecure™

Secure Email Service

Sending confidential email securely is easier than ever with M86 MailMarshal SendSecure. It is a hosted service that provides effortless secure email delivery for confidential or sensitive information to any email recipient in the world. Recipients do not require any special software or training to receive secure messages – just an Internet connection and web browser.

OVERVIEW

M86 Security has partnered with ZixCorp, an industry leader in providing easy-to-use email encryption services, to provide M86 MailMarshal SendSecure. It is an optional service which allows customers to send sensitive emails or confidential documents to any recipient in the world securely, without requiring the recipient to download or install any software.

M86 MailMarshal SendSecure is an optional service add-on for customers using M86 MailMarshal SMTP. M86 MailMarshal SMTP is used to intelligently scan email for confidential information, based on policies you control. When messages conforming to your encryption policies are sent, the message is automatically flagged for secure delivery by M86 MailMarshal SMTP, and is sent over a TLS connection to the M86 MailMarshal SendSecure service.

Once M86 MailMarshal SendSecure has received the message, ZixCorp's Best Method of Delivery™ technology is used to route the message securely to all recipients.

KEY FEATURES

- Ability to send secure messages to any recipient in the world, without special software or pre-requisites
- Encrypted read, compose and reply capabilities for all message recipients enabling secure two-way communication
- Automatic generation of notifications and invitations
- Support for Blackberry® and Windows Mobile® devices
- Compatible with M86 MailMarshal Secure Email Server or similar products
- Custom password policies tailored to your organization's requirements
- No software to install and maintain, hosted service delivery "in the cloud"
- Encryption is automatic and transparent to the sender; no training required

KEY BENEFITS

Secures Email to Anyone, Anywhere

M86 MailMarshal SendSecure allows you to send messages securely to any recipient in the world, without the need to establish a relationship prior to exchanging encrypted messages. Furthermore, it requires no additional software to use; new recipients navigate to the M86 MailMarshal SendSecure Portal to read their messages using a standard Web browser.

Secure Compose and Reply Functionality

After a recipient reads a message that has been securely transmitted to them, they can reply using the custom webmail client on the M86 MailMarshal SendSecure Portal. For an added layer of security, you can choose to only allow your message recipients to reply to your own domains, ensuring privacy.

Compatible with Most Existing Email Encryption Products

If you already use M86 MailMarshal Secure Email Server, or a similar product using the S/MIME or OpenPGP encryption standards, M86 MailMarshal SendSecure can seamlessly complement your existing solution. Standard PKI encryption methods can be used for to send messages within a closed community, providing strong encryption and digital signing capabilities. It can be used to communicate securely with those outside of the traditional PKI community.

Custom Branding of M86 MailMarshal SendSecure Portal

M86 MailMarshal SendSecure's message portal is modified to suit your corporate branding guidelines. Your corporate logo can be added to the site, colors can be changed to meet your company's color scheme, and notifications can be customized to suit your tastes.

Message Delivery Using ZixCorp's Best Method of Delivery™

Using the Best Method of Delivery™ system, M86 MailMarshal SendSecure sends secure email to any recipient in the most secure way possible. If an email is sent from one M86 MailMarshal SendSecure customer to another, it will be sent using the secure TLS tunnels that have already been established. If messages are sent to an unknown recipient, a notification will be generated, and the recipient will be invited to read their secure message via the M86 MailMarshal SendSecure web portal.

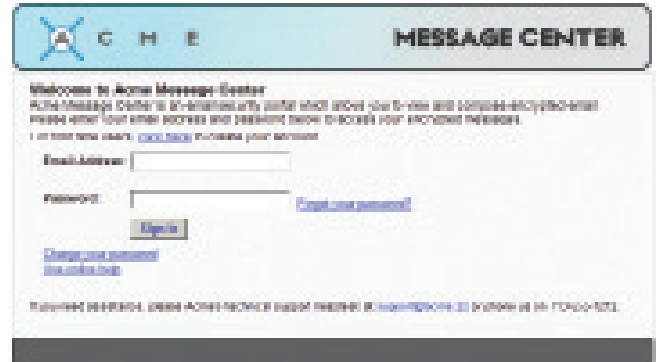

In addition, using M86 MailMarshal SendSecure gives you the ability to send secure messages to anyone in the ZixDirectory, a directory comprised of over 14 million email users, including those in the healthcare, banking, insurance, and technology industries.

Support for Mobile Devices

M86 MailMarshal SendSecure can be used to read and send messages from Blackberry® and Windows Mobile® devices. With it, you can send confidential messages and be sure that the recipient can read and reply securely, no matter what they are using.

Reliable and Cost Effective

M86 MailMarshal SendSecure is easy to set up and requires no maintenance from your internal IT department. M86 MailMarshal SendSecure is hosted in a datacenter and has a 99.9% availability guaranteed to our customers through our service level agreements (SLAs).

THE M86 SENDSECURE PORTAL IS CUSTOMIZED TO INCLUDE YOUR COMPANY'S BRANDING.

SOLUTIONS FOR ALL TYPES OF ORGANIZATIONS

M86 MailMarshal SendSecure is appropriate for any organization with encryption needs, including needs relating to compliance with governmental regulations. Health care providers can use it to send confidential patient information between doctors and hospitals. Financial organizations can use the service to secure transaction records to their key business partners. Other commercial corporations can use M86 MailMarshal SendSecure to guarantee private communications with their customers and suppliers, protecting sensitive data like customer lists, social security numbers, and credit card numbers.

ABOUT M86 SECURITY
